CD8−like Topology: each construct's curves on the same lineage (SLING dimensions 1−2)

Curves compared by the global topology test | Descriptive

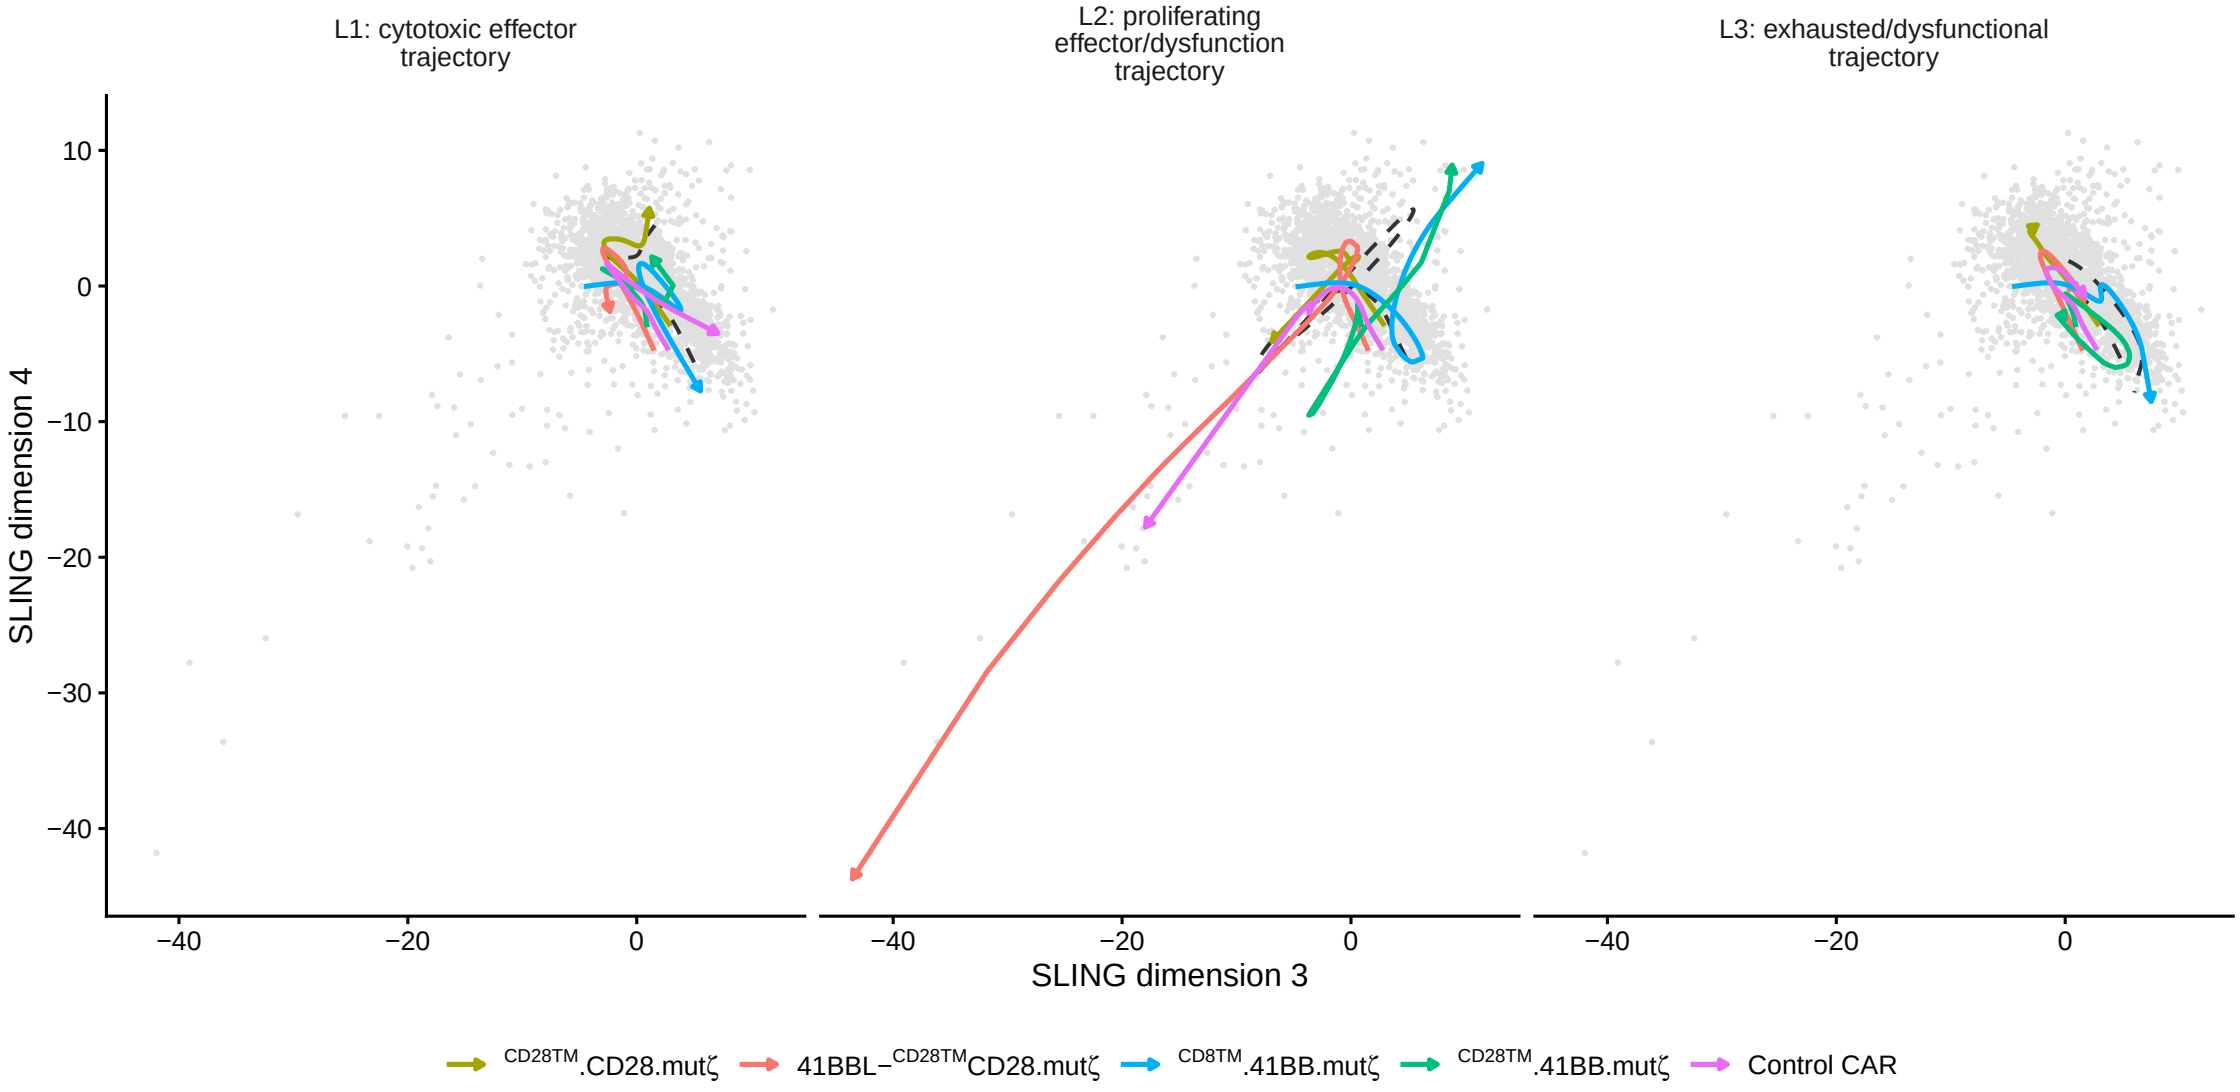

Colored lines: each construct's curves; arrows point to the lineage end. Dashed: all−condition curve. Grey points: all tested cells.
A missing curve means that construct lost the lineage.

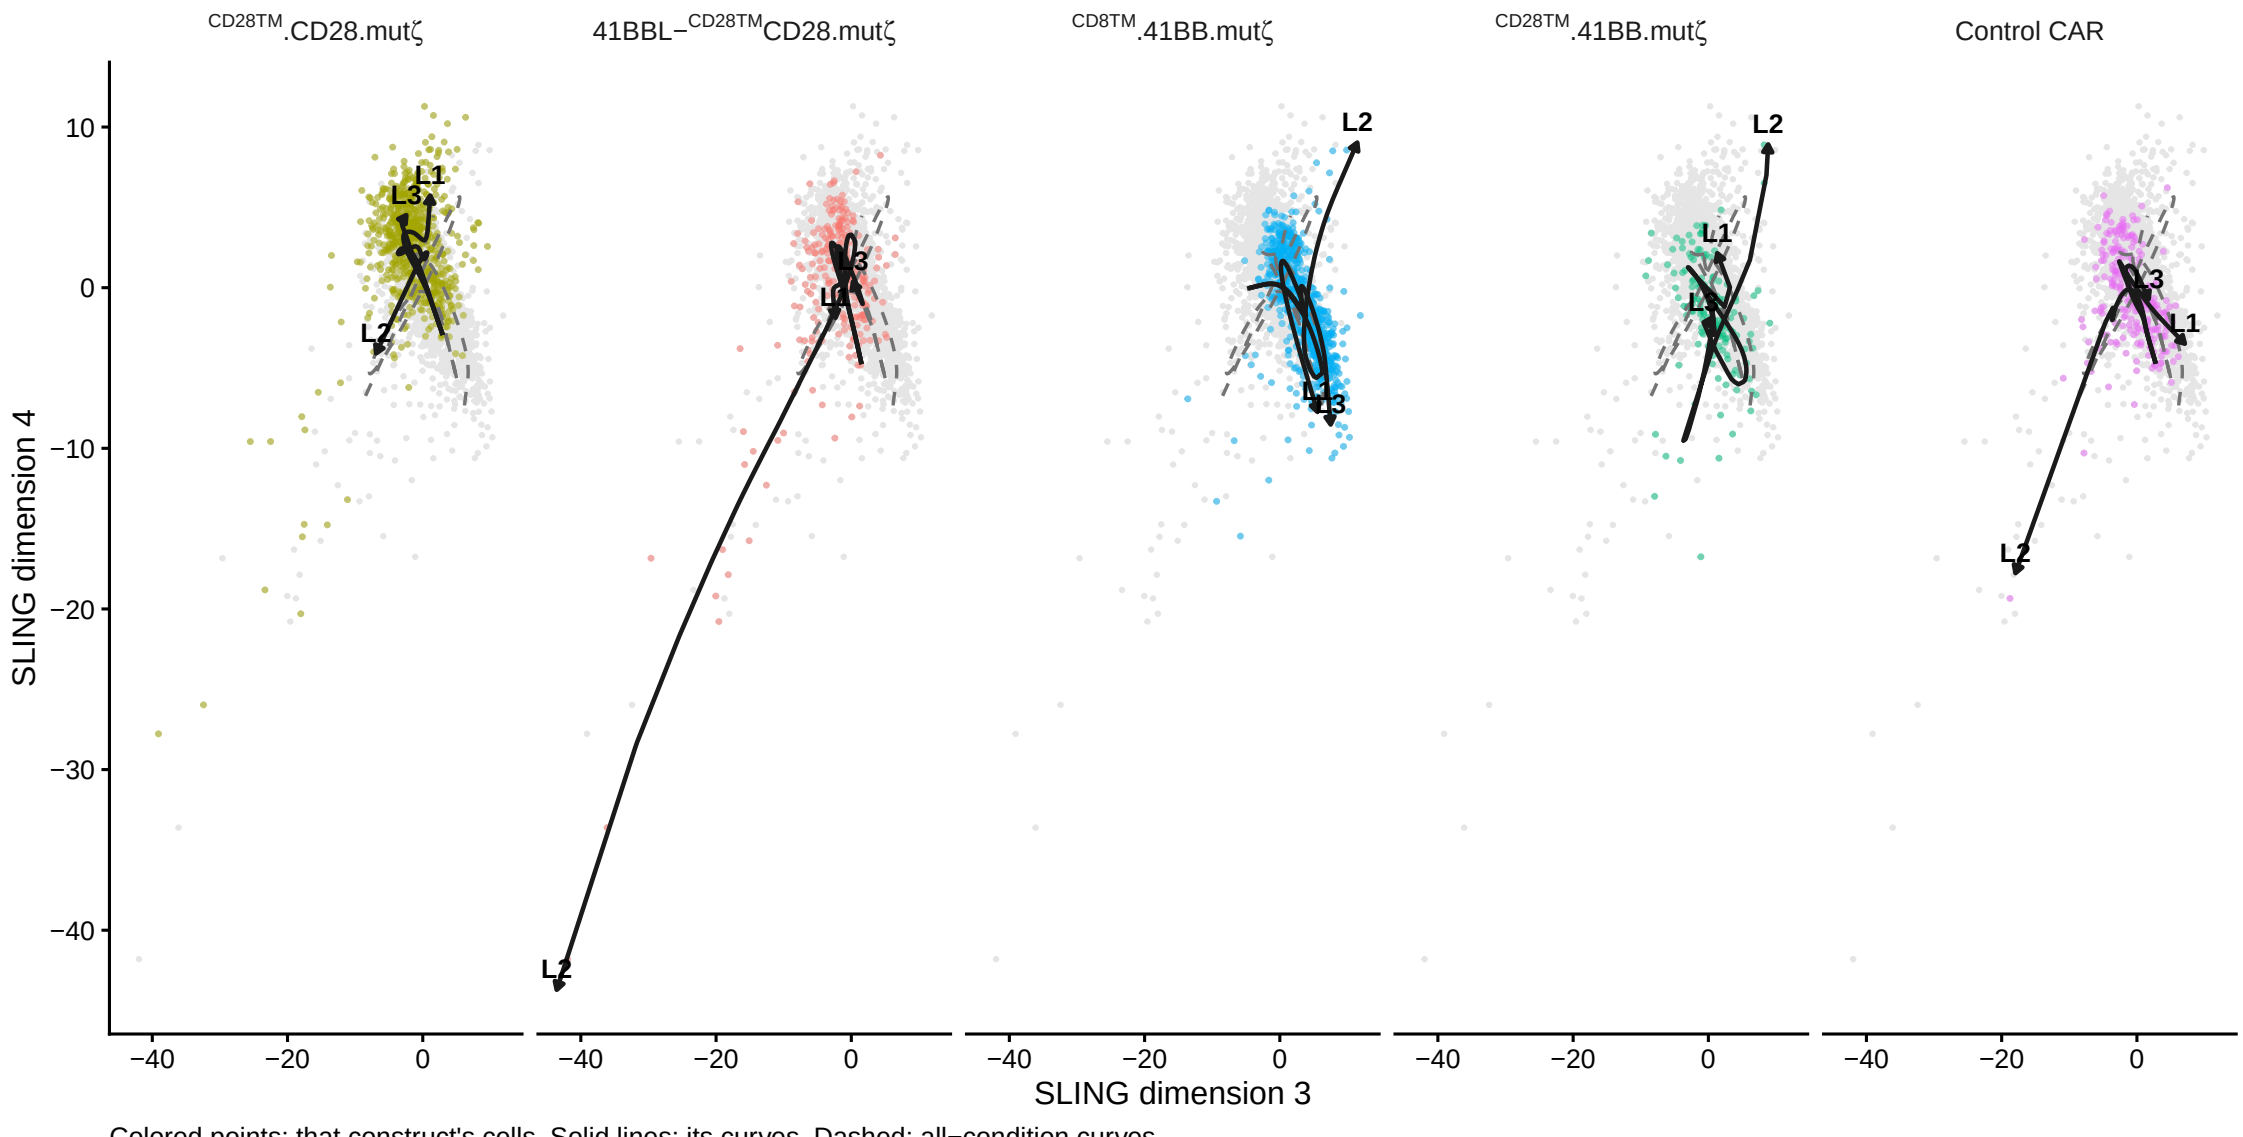

Colored points: that construct's cells. Solid lines: its curves. Dashed: all−condition curves.
L1: cytotoxic effector trajectory; L2: proliferating effector/dysfunction trajectory; L3: exhausted/dysfunctional trajectory

CD8−like Topology: each construct's curves on the same lineage (SLING dimensions 3−4)

Curves compared by the global topology test | Descriptive

Colored lines: each construct's curves; arrows point to the lineage end. Dashed: all−condition curve. Grey points: all tested cells.
A missing curve means that construct lost the lineage.

CD8−like Topology: each construct's own curves (SLING dimensions 3−4)
